Disposable Face Mask

ASTM level 1 equivalent face masks (but testing results would meet an ASTM Level 3 requirement). The top and bottom layer is a non-woven fabric and the middle layer is a Polypropylene ultra fine fiber fusion-sprayed non-woven fabric. The middle layer being key to the effectiveness of proper particle filtering. The middle layer is the same type of treatment applied to N95 masks. Test results show a BFE % \geq 95% but actual results came in between 99.5-99.0% which is level 3.
